REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

prior art does not teach or suggest the combined limitation of generating a delay profile of a received signal and determining intersymbol interference segment from the delay profile wherein the delay of the intersymbol interference segment is longer than the guard interval, and subtracting a copy of the intersymbol interference conforming to the intersymbol interference segment from the received signal, as claimed in claims 2,4,15,16,20 and 21. And further, prior art does not explicitly teach adding the received signal and a demodulated signal wherein the demodulated signal is based on the received signal processed, during when the delay of the intersymbol interference segment is longer than the guard interval, by FFT, channel compensation and then IFFT, as claimed in claim 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Suyama et al. A Maximum Likelihood OFDM Receiver with Smoothed FFT-Window for Large Multipath Delay Difference over the Guard Interval, IEEE 2002, p.1247-1251 disclose OFDM receiver comprising channel estimator, ISI replicator

generator and subtractor wherein FFT window is applied when guard interval has a delay greater than a guard interval of a data.

Suzuki et al. A New OFDM Demodulation Method to Reduce Influence of ISI Due to Longer Delay than Guard Interval, IEEE, 2002, p.239-244, disclose OFDM demodulation method for reducing the influence of ISI and improve bit error performance in multipaths wherein delays are longer than guard interval.
